

Ecosystems and business solutions in Brazil

Ecosystems - should be viewed as providers of basic services to the our survival: food, drinking water, wood, fiber, biochemical and genetic resources, as well as soil formation, flood control, climate regulation, nutrient recycling, as well as services cultural, including religious, recreational, ecotourism and educational, among others.

We are launching in the business sector in my city Tatui with partnerships with rural financial cooperatives and

fulfills another stage of its mission to promote sustainable development in the country.

We are convinced that the scientific findings contained in this study will be fundamental for a change in the current pattern of development, with a view to an economically sufficient socially fair and environmentally sustainable development model.
