

1. What are the dominant fossil fuels used in your country?

Upon checking <http://www.iea.org/Sankey> I discovered that the dominant fossil fuels by our country is coal imports followed by oil imports then biofuels and waste production.

2. Where are the dominant fossil fuels mainly used for in your country?

It is mainly used in our transport system with 11.38 Mtoe followed by other industries.

3. It is your task to create a new policy in order to improve the environmental friendly and sustainable sources and consumption of energy of your country. How would you do that?

I will propose a plan will create a conservative policy at national level that targets different fields of industry. I believe that my country, the Philippines, aims is to decrease its dependence and use of coal by diversifying its energy to establish and secure a more stable and sustainable power supply and in order to that we should promote the use of renewable energy.

I will focus more on the built environment and its technologies. I believe that we will be able to provide mitigating measures to reduce energy consumption with a good designs with our built environment with the help of the Architects by providing seminars or intensive learning about the cause and effects considering sustainable or alternative energy for their designs.
